

Round Slings DUPLIX

Unbeatable - WLL up to 400 t Lifting Equipment from VTT

Specially developed to cope with heavy loads

Duplix round slings are top-flight technological products for achieving an optimum combination of best possible safety, simple handling and a long service life. Their sturdy design and high degree of flexibility permit safe and careful lifting of heavy loads, both in industry and in haulage business, as well as in the construction of power stations and on above and below ground building sites.

Top-flight technology for extreme loading stresses

The core of DUPLIX round slings consists of polyester multifilaments, bundled in parallel and lapped. This gives the core an enormous tensile strength. The special dense weave of the 2-part covering layer is particularly resistant to abrasion and long lasting. The colour of the outer covering indicates the sling's load capacity; the inner covering is always coloured black, so that any possible damage becomes immediately visible.

VTT-products are well known for their quality

As with all VTT's products, DUPLIX round slings are manufactured from first-class materials. They pass through an exacting quality control process and fulfil all the standards relating to safety (EN1492-2).

Well thought-out details, such as a woven silver thread, indicate a sling's loading capacity and even when the sling is very dirty and the imprints are no longer legible.

DUPLIX Round Slings - high resistance against damagings!
